

EDITORIALS

This is a No. 3 of volume 16 of the Thai Journal of Obstetrics and Gynaecology, the official journal of Royal Thai College of Obstetricians and Gynaecologists. We would like to achieve high quality and valuable journal for our members. Thus, we would like to recommend an accepted method to report a randomized controlled trial (RCT). As stated in many International Standard Journals, the authors who would like to report randomized controlled trials, should follow the CONSORT (Consolidated Standards of Reporting Trials) statement. This statement is used for helping authors improve reporting of two-parallel design RCTs by using a checklist and flow diagram. For example; in the methods section, the authors should report method used to implement the random allocation sequence (e.g., numbered containers or central telephone), clarifying whether the sequence was concealed until interventions were assigned. More details of the CONSORT statement can be seen at www.consort-statement.org or JAMA 2001;285:1987-91.

As the renewed volume of the Thai Journal of Obstetrics and Gynaecology, all constructive comments and suggestions are welcome for improvement of our journal.
